

## IN THE CLAIMS:

1. (currently amended) A telecommunications system comprising a reference server database ~~intended to be~~ connected to at least one terminal by means of a communication network, said reference server further comprising ~~[[the]] a database including a so-called reference server, intended to containing~~ comprising data associated with at least one domain name, and said system comprising at least one first and one second auxiliary server ~~intended to containing~~ data previously recorded within said database of said ~~[[the]]~~ reference server and respectively provided with ~~[[a]]~~ first and second authorisation access levels ~~degree of confidentiality~~, at least one of the first and second auxiliary servers being provided with identification means for preventing any access to the data that it contains by terminals not having access authorisation compatible with the authorization access level ~~degree of confidentiality~~ attributed to the data contained in this auxiliary server.

2. (currently amended) The telecommunications system of claim 1, comprised in that the database is provided with means of duplicating the data contained in the reference server to the first and second auxiliary servers according to the authorization access levels ~~degrees of confidentiality~~ attributed to the said data.

3. (currently amended) The telecommunications system of claim 1, comprised in that the first and second auxiliary servers are provided with identification means to prevent any access to the data contained in the first and second auxiliary servers by terminals not having access authorisations respectively compatible with the first and second authorization access levels ~~degrees of confidentiality~~.

4. (currently amended) The telecommunications system of claim 1, comprised in that the reference server is provided with identification means for preventing of any reading of data contained in the said reference server from terminals not having access authorisation compatible with the a third authorization access level ~~degree of confidentiality~~.

5. (currently amended) The telecommunications system of claim ~~[[1]]~~ 4, comprised in that the third authorization access level ~~degree of confidentiality~~ has a restrictive effect greater than the restrictive effects produced by the first and second authorization access levels ~~degrees of confidentiality~~.

6. (currently amended) The telecommunications system of claim 1, comprised in that the reference server is provided with identification means for preventing any writing of data in the said reference server from a terminal not having access authorisation compatible with an authorization access level ~~a greater degree of confidentiality~~ having a restrictive effect greater than the restrictive effect produced by all the other authorization access levels ~~degrees of confidentiality~~ attributed to the data contained in the reference server and the auxiliary servers.

7. (currently amended) A device for storing information comprising a so-called reference server and at least a first and second auxiliary server ~~intended to containing~~ data previously recorded within the reference server and respectively provided with a first and second authorization access level ~~degree of confidentiality~~, at least one of the first and second auxiliary servers being provided with identification means for preventing any access to the data that they contain by applicants not having access authorization compatible with the authorization access level ~~degree of confidentiality~~ attributed to the data contained in this auxiliary server.
